DETAILED ACTION

1. This action is responsive to the following communication: Application filed on September 19, 2005.
2. Claims 1-10 are pending in this case. Claim 1 is an independent claim.

EXAMINER'S AMENDMENT

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

4. **Add the following Abstract** after the last page of the Specification, to become page 17 of the Specification, **as a separate page**, with the title **"Abstract."**

- - A nonvolatile memory array includes a grid of word lines WL1, . . . ,WL6 and bit lines BL1, . . . ,BL8. Of a plurality of memory cells **210**, each memory cell is located at an intersection region of one of the word lines and one of the bit lines. A read/write circuit **280** for reading/writing a data word including a plurality of bits is operative to map each pair of sequential bits of the data word to a respective pair of memory cells located at intersection regions of both a different word line and a different bit line. - -

Allowable Subject Matter

5. Claims 1 – 10 are allowed.

Reasons for Allowance

6. The following is an examiner's statement of reasons for allowance:

With respect to **independent claim 1** (and claims 2 – 10 which further depend), there is no teaching, suggestion, or motivation for combination in the prior art to the circuit being operative to map each pair of sequential bits of the data word to a respective pair of memory cells located at intersection regions of both a different word line and a different bit line.

The prior art made of record and considered pertinent to applicant's disclosure: U.S. Patent 5,640,343 to *Gallagher et al.* ("*Gallagher*"), U.S. Pub. No. 2003/0193831 A1 to *Baker* ("*Baker*") and U.S. Patent No. 6,115,323 to *Hashimoto* ("*Hashimoto*").

Gallagher and *Baker* both teach a MRAM with a plurality of word lines, a plurality of bit lines and a plurality of memory cells, with each memory cell being located at an intersection of one of the word lines and one of the bit lines. However, *Gallagher* and *Baker* both fail to teach the circuit being operative to map each pair of sequential bits of the data word to a respective pair of memory cells located at intersection regions of both a different word line and a different bit line. Please note: *Gallagher* is as listed in the applicant's IDS dated 9/19/2005.

Hashimoto teaches method for storing data with efficient page access. However, *Hashimoto* fails to teach the circuit being operative to map each pair of sequential bits of

the data word to a respective pair of memory cells located at intersection regions of both a different word line and a different bit line.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

When responding to this office action, applicants are advised to provide the examiner with the page numbers and line numbers in the application and/or references cited to assist the examiner in locating appropriate paragraphs.

A shortened statutory period for response to this action is set to expire three months and zero days from the mailing date of this letter. Failure to respond within the period for response will cause this application to become abandoned (see MPEP 710.02(b)).
